

LEVEL 2 ON TRIAL

Practical Delivery of COBIE at BRE / BUILDINGSMART

By: David Owens – Costain Design & BIM Manager

A556

Knutsford to Bowdon Improvement Scheme

WHY BIM.....

"This Government's four year strategy for BIM implementation will change the dynamics and behaviours of the construction supply chain, unlocking new, more efficient and collaborative ways of working. This whole sector adoption of BIM will put us at the vanguard of a new digital construction era and position the UK to become the world leaders in BIM."

Francis Maude
Minister for the Cabinet Office

The hypothesis is:

Government as a client can derive significant improvements in cost, value and carbon performance through the use of open sharable asset information. See <http://www.bimtaskgroup.org/bim-faqs/>

LEVEL 2 ON TRIAL

Presentation Topics:

- No EIRs... Don't Panic
- Level of Definition... Detail... Whatever !
- Asset Unknown's
- 3D Design - not just Revit
- Data, data, data

KNUTSFORD TO BOWDON IMPROVEMENT SCHEME

Carriageway

11% HGV

- Highways Agency
- Proposed
- 7.5km Dual Carriageway
- In excess of 750,000 m² of earthworks
- Re-modelling of the M56
- 7 new Over-bridges
- Improvements to the A556
- Mainline
- Improvements to the existing A556 to provide a 2 lane route along its length.

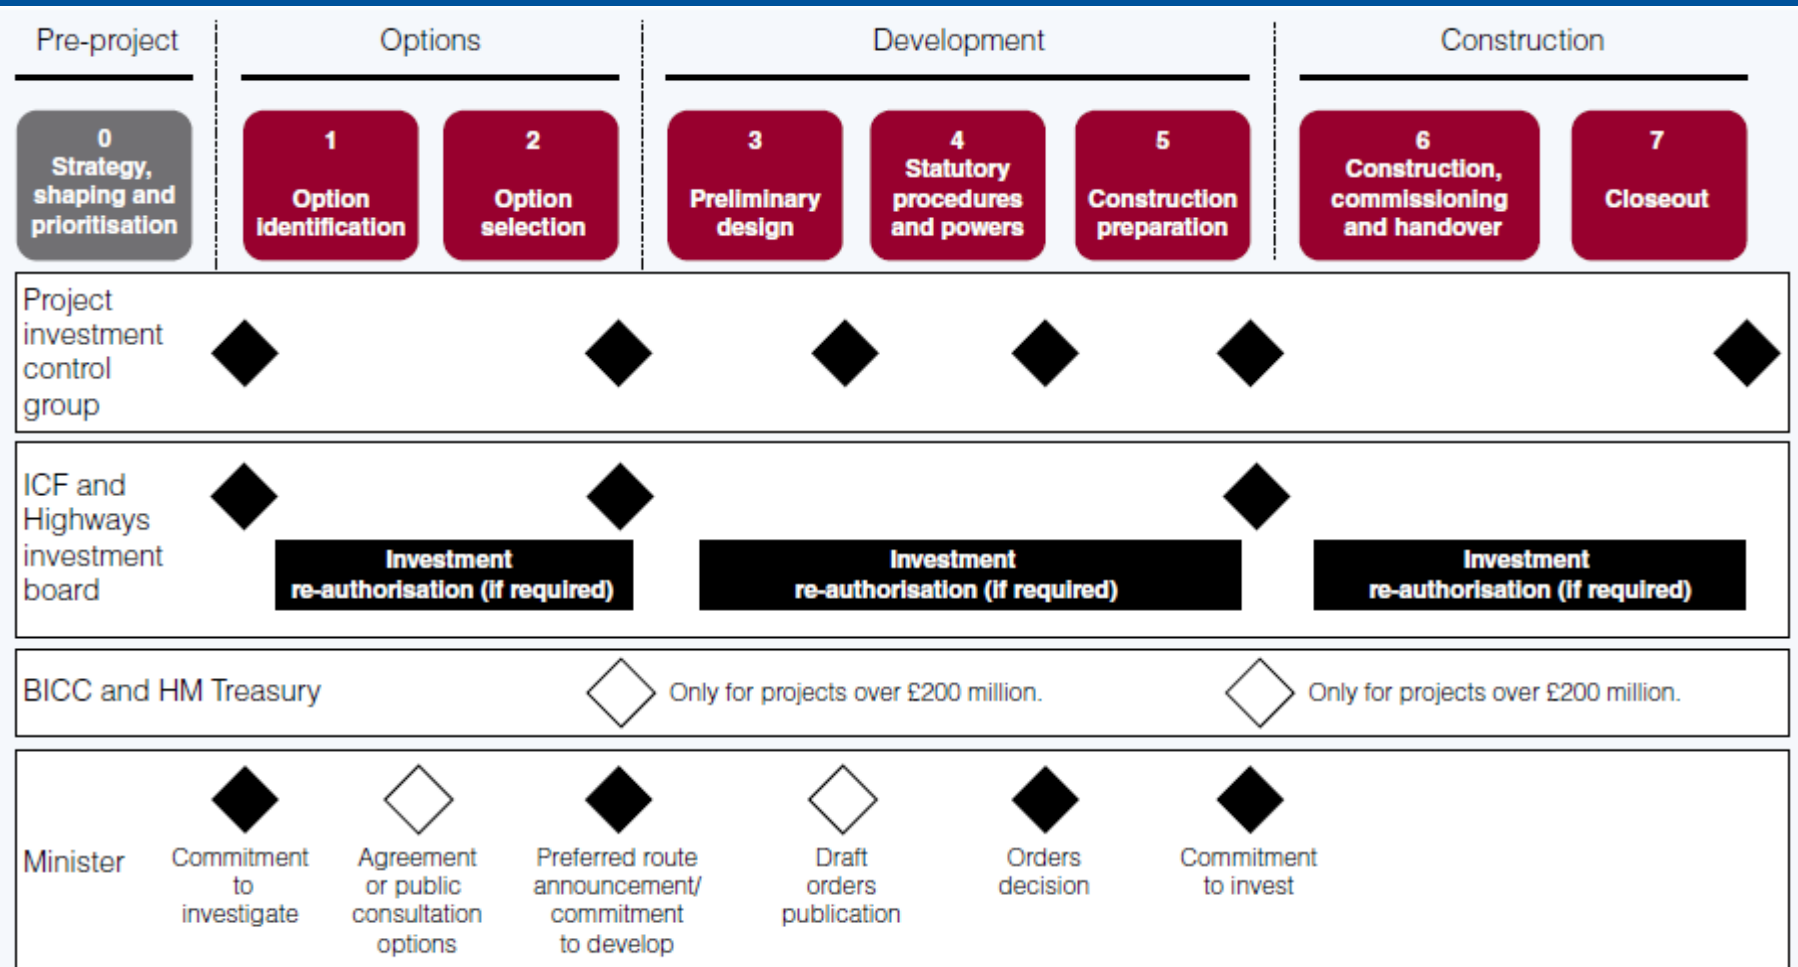

Programme

- Design: Sept 2013 - Nov 2014
- Onsite: Nov 2014 - 2017

HA BIM Framework
BIM Level 2 ... please
Adopter

No EIRs.... No PROBLEM

No EIRs.... No PROBLEM...

WHY !

- Business Management Standards:
 - ISO 9001 | BS7000-4 | BS1192:2007 | PAS1192-2 | ISO 55000
- Data Standards
 - ISO 12006 - Uniclass | ISO 16739 – IFC | BS1192-4 ???? - COBie
- CPlx Protocol from CPIC - Construction Project Information Committee
 - BIM Execution Plan | BIM Assessment Form
 - Supplier IT Assessment Form | Resource Assessment Form
- CIC BIM Protocol

CLIENT SPECIFIC

- Highways Agency Project Control Framework (PCF)
- Asset Data Management Manual (ADMM)
- NEW !
 - IANxxxx/14 - HA Data & CAD Standard
 - IAN182/14 - Enabling Handover into Operation and Maintenance

No EIRs.... No PROBLEM...

Respond in kind

- Process - Design Management Handbook including
 - Project BIM Strategy & Post Contract BIM Execution Plan
 - MIDP – Master Information Delivery Plan (eg combines Doc Register & Programme)
 - Volume Strategy
- Technology
 - CDE - Bentley ProjectWise
 - Design - Autodesk AutoCAD Map 3D / Civil 3D & Revit
 - Quality – SQL db & Mobile (Field BIM)

But of course

- Prepare Guidance needed to implement
- Help the client along the journey – HA Interim Advice Note (like a PAS)

LEVEL OF DEFINITION... WELL 'DETAIL' REALLY

Discipline	Tool	LoD	Comments
Pavement & Earthworks	Map/C3D	LOD 3	Embedded info; Construction layers and Chainage of regions included
Bridges	Revit	LOD 3	Concrete + Steel face but no rebar
Gantries	??	LOD 3	Unknown until supplier on board
Retaining Walls	Revit	LOD 3	Few retaining wall on scheme
Site Clearance	Map/C3D	LOD 4	Info created in 3D but with linked data
Boundary Fences	Map/C3D	LOD 2	Simple geometric representation of space required
Safety Barrier	Map/C3D	LOD 2	Simple geometric representation of space required
Drainage	C3D+ Windes	LOD 4	C3D attributed data migrates into Navis
Signs	PDS	LOD 4	Test files look promising and inc attributed data
Lines	PDS	LOD 4	Test file look promising
Lighting	KeyLights	LOD 4	2D & 3D blocks with attributed data

Pavement - LoD 3

C3D Model: Very detailed in terms of earthworks/pavement construction by carriageway and chainage.

LEVEL OF DEFINITION

Gantries - LoD 3

Image represents the aspiration for A556

Gantry manufacturer might provide accurate detailed model?

Integrated Asset Management Information System

Highways Agency Pavement Management System AND Scheduled Road Works

Highways Agency Drainage Data Management System

Structures Management Information System

Highways Agency Geotechnical Data Management System

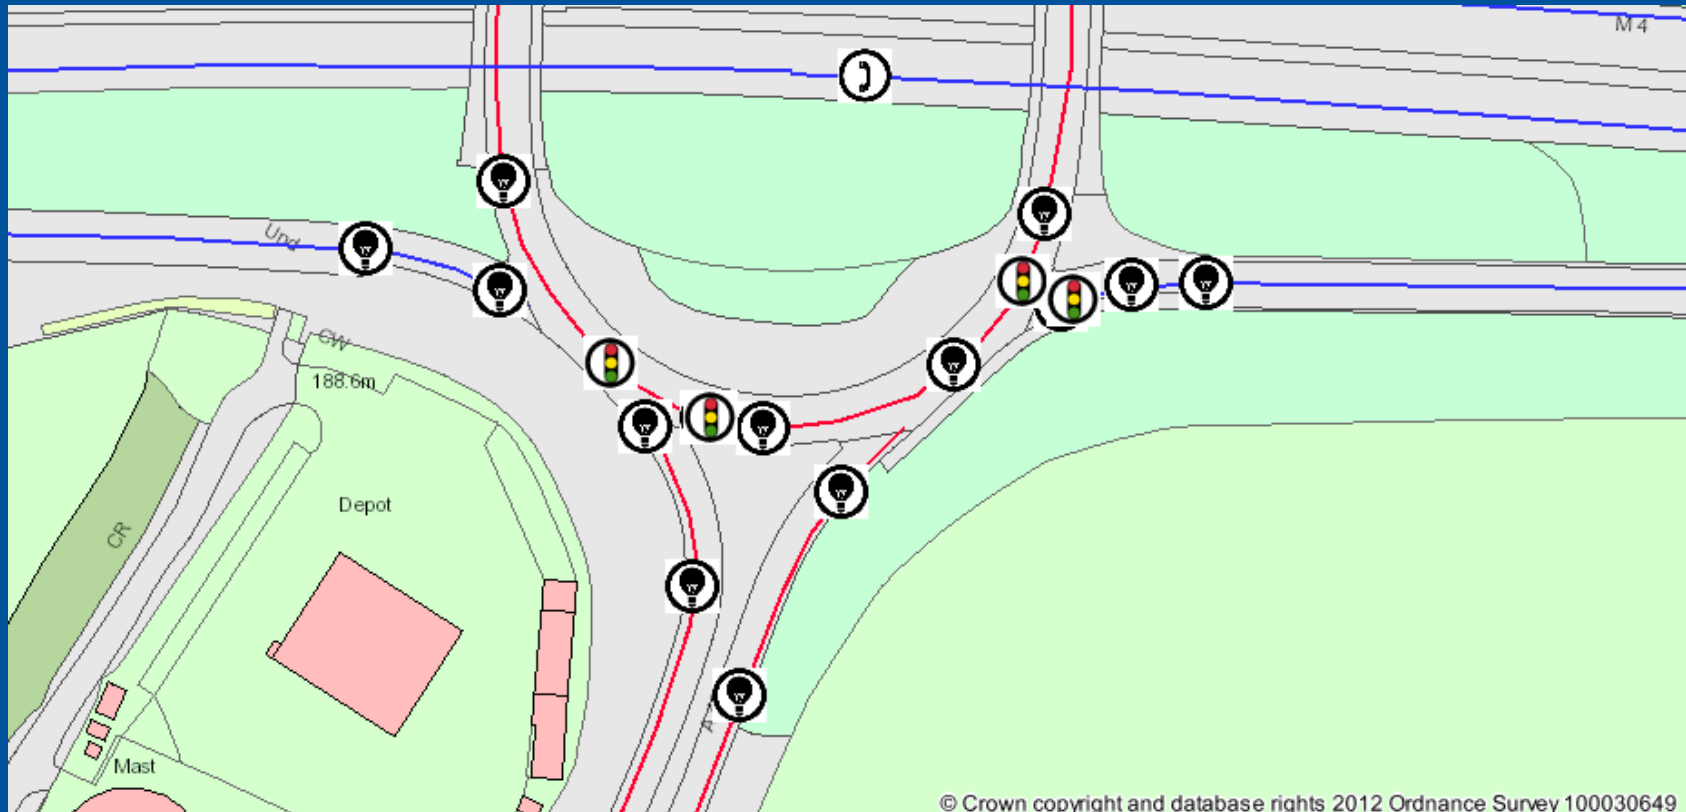

Bentley Exor based system

Routine Maintenance Management Systems

IAM-IS will replace 17 Agency and supply chain systems

ASSET UNKNOWN'S.... NOT ANY MORE

IAM-IS.... A GRAPHICAL INFORMATION SYSTEM

E.5.52 Vehicle Restraint System

Asset Code:	VRS	Description:	Vehicle Restraint System
-------------	-----	--------------	--------------------------

Vehicle Restraint Systems (VRS) or Safety Fences appear on the road network in several forms and are most prevalent but not confined to motorways, dual-carriageways, junctions and approaches to roundabouts. The main purpose of Vehicle Restraint Systems is to restrain or redirect errant vehicles from crossing central reservations into the path of other vehicles or from leaving the highway following accidents or collisions. The purpose of which is to prevent harm to vehicle occupants or other road users.

The most common form of Vehicle Restraint Systems consists of permanent steel posts supporting steel beams another type consists of fabricated wire cables, commonly known as wire rope barriers. Other forms of permanent retention systems can be identified as continuous smooth surface Safety Barriers, the most common form is constructed of concrete.

Asset Metadata Configuration

The asset metadata configuration defines the behaviour of an asset type e.g. whether the Asset type is a Point or Continuous feature or whether Asset of this type is Replaceable when network elements are end-dated.

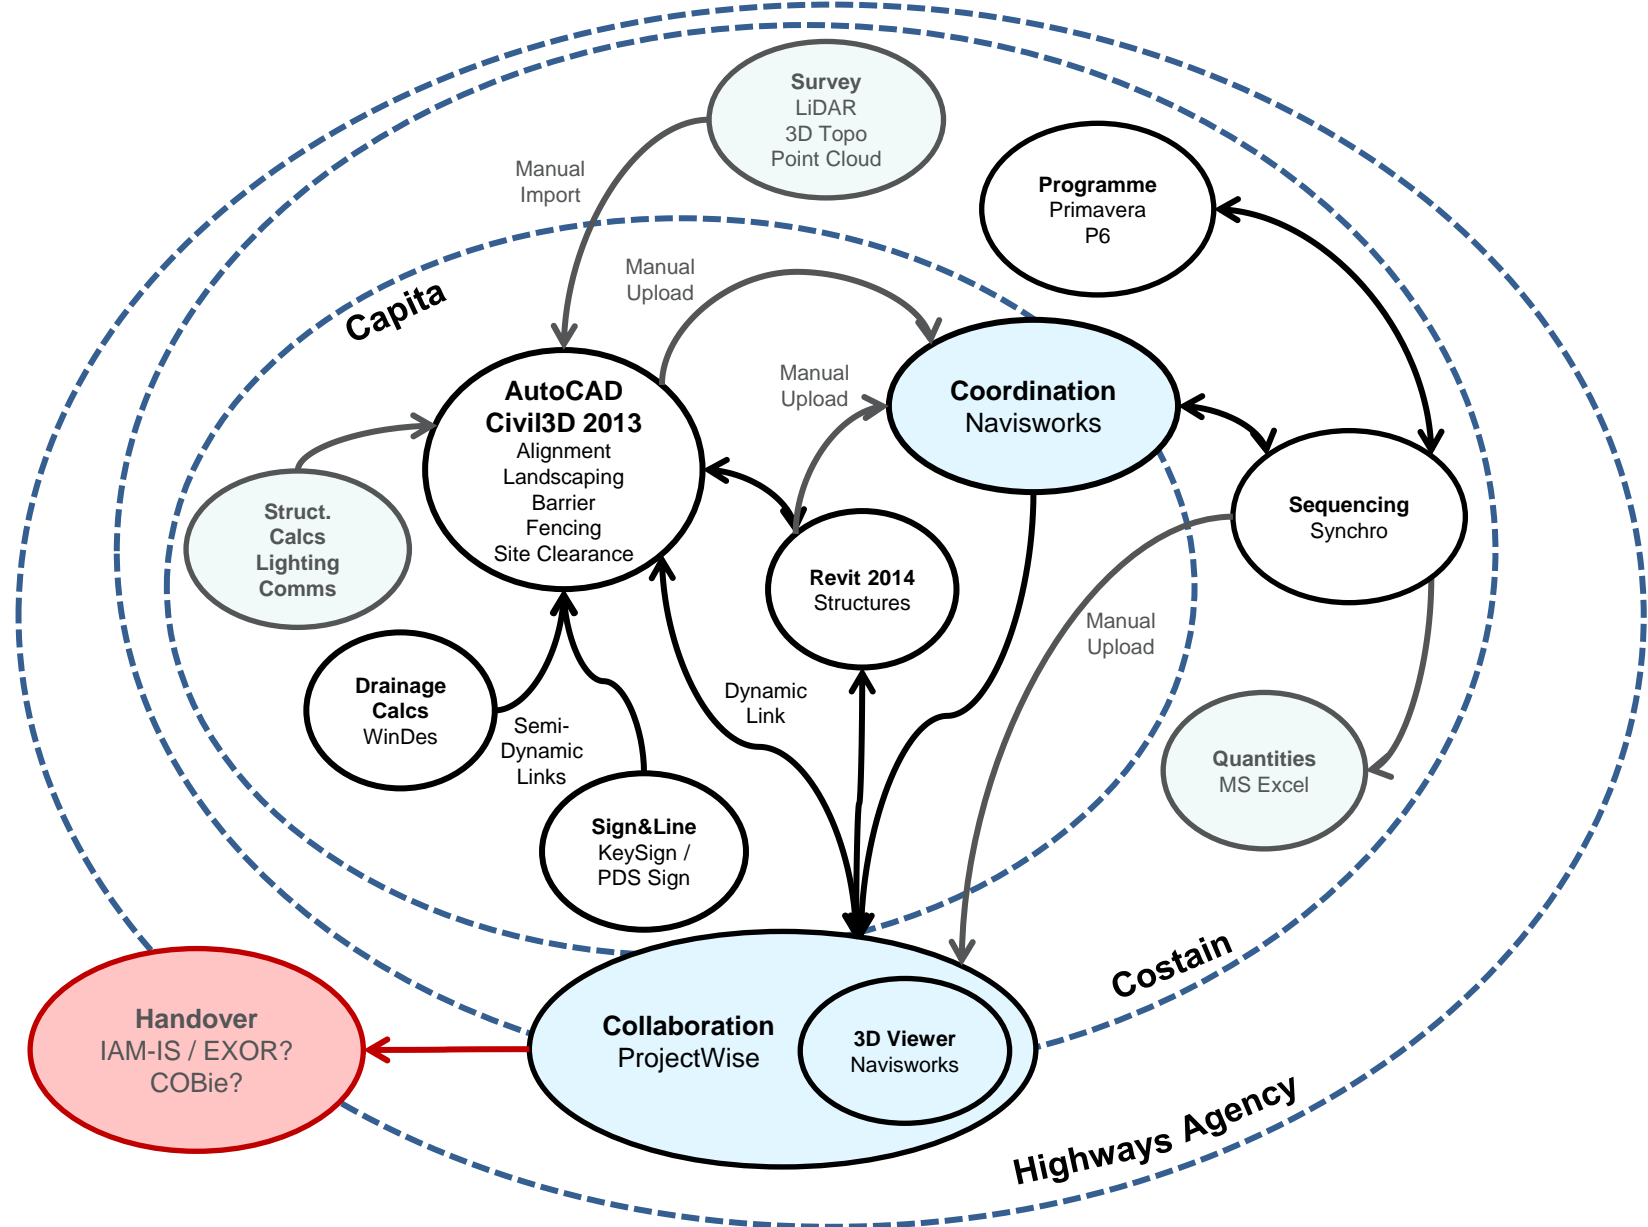

Configuration Option	Configuration Value	Configuration Meaning
Point or Continuous	Continuous	The Asset Type is a Line feature, i.e. an An Asset Item of this type has different Start and End points.
XSP Required	Yes	The Asset Type requires a cross sectional position.
Locate by X Y	No	Assets of this Type will not be located using Geographical Co-ordinates (e.g. Grid References).
Contiguous	No	This Asset type is not mandatory along the entire length of a Network Element.
Replaceable	Yes	An Asset Item of this Type can be end-dated as a result of a Network Operation being carried out on the Network Element or Elements on which an Item of this Type is located. Note that a Network Element cannot be Closed (End-Dated) if any Asset Items that are either wholly or partially located on the Element are of an Asset Type which HAS NOT been flagged as Replaceable.
Exclusive	No	The Asset Type may exist more than once for a given Network Location. If the 'XSP Allowed' flag is also selected and the Asset Type can reside in Multiple XSP's

Configuration Option	Configuration Value	Configuration Meaning
		and within the same XSP, i.e. many Items of a non-exclusive Asset Type may exist at the same linear offset within the same XSP, but the values of the 'Exclusive Flexible Attributes' must differ for each item.
Multiple Locations	Yes	This Asset type may have multiple disparate locations. If this checkbox is selected the system will check for the existence of any location records already associated with an Asset Item when a new location record is added. The User will be prompted to either append or replace existing location records.
End Location Only	No	The Asset Items of this type will not remain 'open' i.e. It will be End Dated, if the Network Element to which it is associated is End Dated.
Top of Hierarchy	Yes	The Asset Item of this Type is used within an Asset Hierarchy and this Asset Type is at the Top Level of the Asset Hierarchy eg Parent Asset.

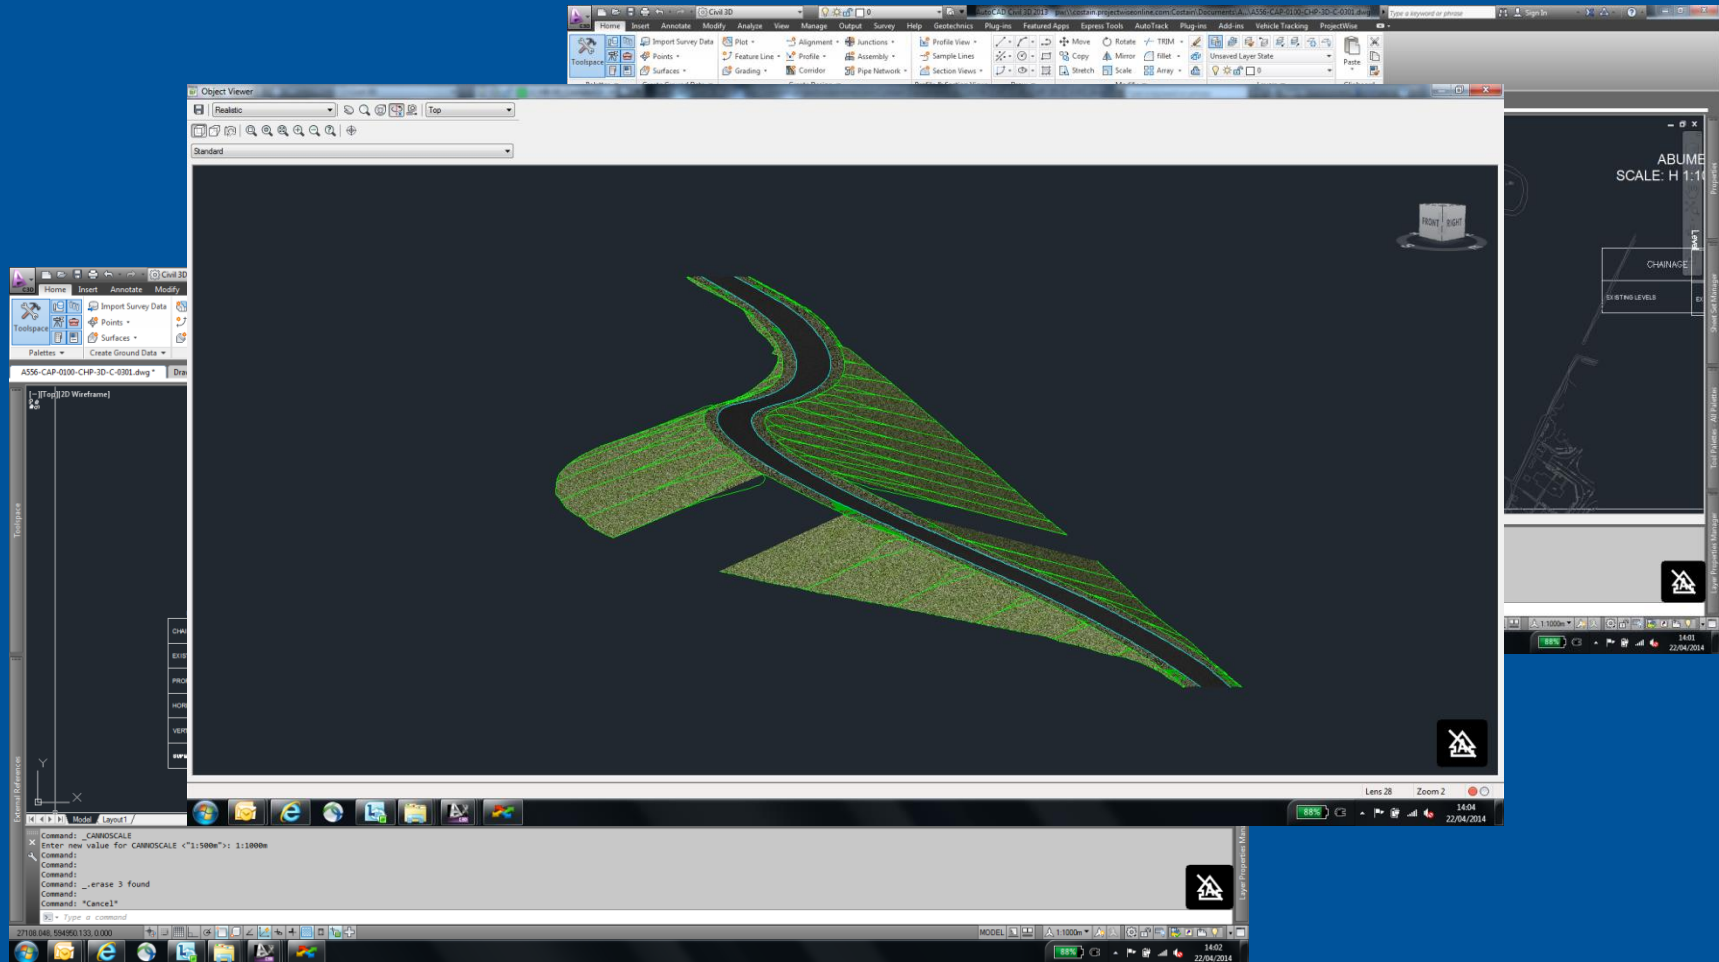

Asset Attributes

The asset attributes define the characteristics of an individual asset eg where it is, how large it is, when was it constructed or who owns it.

Field Name	Field Format	Mandatory Required Optional	Field Domain	Additional Information
Type	VARCHAR2	M	VRS_TYPE	
Asset ID	VARCHAR2	O		
Source ID	NUMBER	O		
Shape	VARCHAR2	M	VRS_SHAPE	
Beam/Concrete Profile	VARCHAR2	M	VRS_BEAM	
Manufacturer	VARCHAR2	O		
Design / Drawing Number	VARCHAR2	O		
Owner	VARCHAR2	M	ALL_OWNER	
Hazard (reason for VRS)	VARCHAR2	O	VRS_HAZARD	
Connected Parapet	NUMBER	O		
Current	VARCHAR2	M	CURRENT MAINTENANCE	

3D DESIGN.... NOT JUST REVIT AUTOCAD TOO... VANILLA / MAP3D & CIVIL3D

LINKED DATABASES

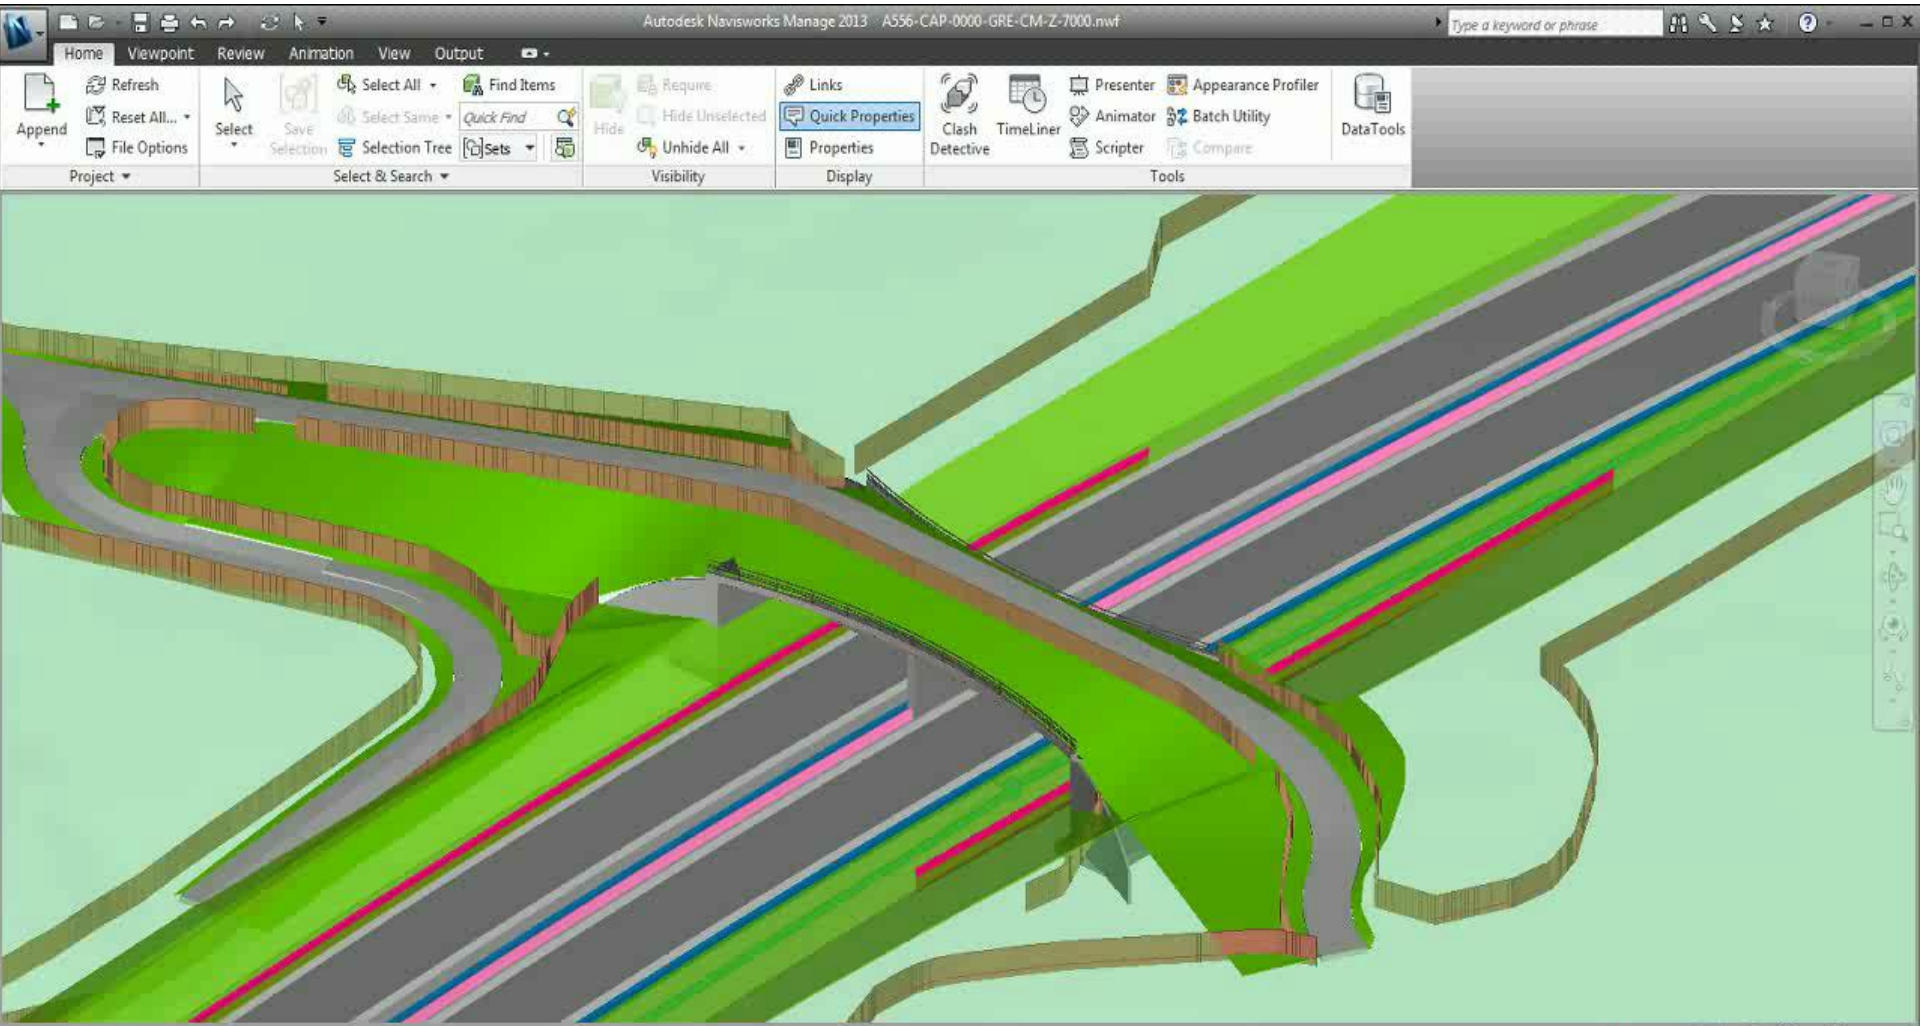

- **Civil 3D Data Linking**
 - Extract Data to Database
 - Add Custom Fields
 - Re-link all data to Objects in Navisworks Model
- Database can be Updated by Non-CAD Users
- Data can be bound into Model for Field BIM
- Data can be transposed and transferred

A556 HIGHWAYS DATA LINKING

The screenshot displays the AutoCAD Civil 3D interface with several key components for data linking:

- Link To Pipe Networks Dialog:** Shows a list of pipe networks to link, with 'Catchment B' selected. A status bar at the bottom indicates '2 record(s) are linked to 2 selected records'.
- Data View - Pipes Table:** A table listing pipe records with columns for ID, NET_NAME, and PART. Record 607 is highlighted.
- Edit Link Dialog:** Shows the connection details for the selected pipe, including the ODBC Driver (Microsoft Access Driver) and the SQL String: `SELECT * FROM Pipes WHERE NET_NAME = '%prop("Item", "Name")'`.
- Properties Dialog:** Shows the properties for the selected pipe structure, including Chamber Type (Type 7), Cover Grade (D400), Cover Size (900x900), and Network Name (Catchment B).
