

Measuring the environmental performance of construction materials:

The Green Guide to Specification – Roofing  
and Hard landscaping

BREEAM Materials, BRE Global

February 2009

## Overview

- Sustainability context and buildings
- LCA and Environmental Profiles Methodology
- The Green Guide to Specification
- Use of the Green Guide – BREEAM and The Code
- Impacts of roofing and hard landscaping

# Sustainability – Why are we here?

# Construction industry and buildings

- Large impacts
  - Construction and demolition waste alone represents 32% of total UK waste (DEFRA)
  - the energy used in constructing, occupying and operating buildings represents approximately 50% of greenhouse gas emissions in the UK. (Environment Agency 2007)
  - Passenger transport vehicles account for a further 15% of CO<sub>2</sub> emissions. (EST)

# Sustainability: How does this apply to buildings?

- Sustainability is a complex & political agenda
- Generally no agreed consensus
- Likely to always change depending upon context
- Lots of **Greenwash**
- No single tool for measuring sustainability
- Industry using many tools/methods/systems;
  - Life Cycle Assessment (LCA)
  - BREEAM
  - Code for Sustainable Homes (CSH)
  - Carbon Labelling & Footprinting
  - Whole Life Costing (WLC)
  - Environmental Product Declarations (EPD's)
  - Many others...

**Looking at the product level...**

How do we measure environmental performance?

## **Life Cycle Assessment (LCA)**

# Life Cycle Assessment (LCA)

**Extraction**

**Creation**

**Maintenance**

**Disposal**

**Environmental  
impacts**

# How can LCA be used in the Industry?

- To measure existing performance and monitor improvements
- To assess benefits of innovative processes
- To compare materials which offer the similar functions, eg external wall constructions
- To compare building designs over their expected lifetimes
- Used in the BRE Environmental Profiles Methodology
- Applied in tools like The Green Guide to Specification

# What is an Environmental Profile?

Measurement of the **environmental performance** of a material, product or system over a set time period.

- Extraction of raw materials & transport ("cradle to gate")
- Production ("gate to gate")
- Transport, installation and end of life ("gate to grave")

Achieved using Life Cycle Assessment (LCA)

Used in BRE 2007 Environmental Profiles Methodology

- **Level playing field for assessing construction products**

Outcome is a Type III Environmental Product Declaration (EPD) compliant with ISO 14025 (externally audited by UKAS)

# Environmental Profiles 2008 Impact categories

Environmental Issue	Weighting (%)
Climate Change	21.6
Water extraction	11.7
Mineral resource depletion	9.8
Stratospheric ozone depletion	9.1
Human toxicity	8.6
Ecotoxicity to water	8.6
Nuclear waste	8.2
Ecotoxicity to land	8.0
Waste disposal	7.7
Fossil fuel depletion	3.3
Eutrophication	3.0
Photochemical ozone creation	0.20
Acidification	0.05

## Approved Environmental Profile

Characterised and Normalised Data for:  
1 square metre over 60 Year Life: Floor finish: Hard floor coverings:  
Tarkett Sommer Homogeneous IQ Vinyl flooring

*Quality of Data for Certified Material (Data for other constituent materials are available from BRE)*

Start Date	1 January 2002
End Date	31 December 2002
Source of Data	Tarkett Sommer
Geography	Sweden
Representativeness	1 Site Representing 100% of Tarkett Sommer's Homogeneous IQ Vinyl Flooring Production

LCA Methodology: BRE Environmental Profiles  
Allocation: 100% to Product  
Date of Data Entry: 3 June 2003  
Boundary: Cradle to Grave over 60 Year Building Life  
Comments:

Issue	Characterised Data	Unit
Climate Change	25	kg CO2 eq. (100yr)
Acid Deposition	0.2	kg SO2 eq.
Ozone Depletion	0.000022	kg CFC11 eq.
Pollution to Air: Human Toxicity	0.32	kg tox.
Pollution to Air: Photochemical Ozone Creation Potential	0.039	kg ethene eq.
Pollution to Water: Human Toxicity	0	kg tox.
Pollution to Water: Ecotoxicity	500	m³ tox.
Pollution to Water: Eutrophication	0.015	kg PO4 eq.
Fossil Fuel Depletion	0.018	toe
Minerals Extraction	0.02	tonnes
Water Extraction	720	litres
Waste Disposal	0.02	tonnes
Transport Pollution & Congestion: Freight	17	tonne.km

Issue	Normalised Data	UK Citizen's Impact
Climate Change	0.002	12300 kg CO2 eq. (100yr)
Acid Deposition	0.0004	58.9 kg SO2 eq.
Ozone Depletion	0.000077	0.286 kg CFC11 eq.
Pollution to Air: Human Toxicity	0.0035	90.7 kg tox.
Pollution to Air: Photochemical Ozone Creation Potential	0.0012	32.2 kg ethene eq.
Pollution to Water: Human Toxicity	0	0.0117 kg tox.
Pollution to Water: Ecotoxicity	0.0028	178000 m³ tox.
Pollution to Water: Eutrophication	0.0019	8.01 kg PO4 eq.
Fossil Fuel Depletion	0.0043	4.00 toe
Minerals Extraction	0.004	5.04 tonnes
Water Extraction	0.0017	418000 litres
Waste Disposal	0.0028	7.19 tonnes
Transport Pollution & Congestion: Freight	0.0041	4140 tonne.km
Primary Energy	0.3	GJ
<b>BRE Ecopoints Score</b>	<b>0.24</b>	<b>Ecopoints</b>

# BRE Global: Certified Environmental Profiles

- Sister company to BRE (previously BRE Certification)
- Data verification process – evidence
- Supports external claims
- Environmental Profiles valid 3 years
- An independent environmental product declaration
- Whole process revolves around:
  - Product manufacture data
  - Data verification (Factory site audit)
  - Data modelling – LCA methodology

# What do you do with an Environmental Profile?

## Comparison at a building element level

Bricks vs bricks

Wall specifications

VS

Blocks vs blocks

# The Green Guide to Specification

- Ecopoints for building materials placed into specifications
- Environmental impacts of building elements
- Based on LCA
- A+ to E rating

## Welcome to The Green Guide to Specification Online

**Green Guide online provides designers and specifiers with easy-to-use guidance on how to make the best environmental choices when selecting construction materials and components.**

In the Green Guide online, building materials and components are assessed in terms of their environmental impact across their entire life cycle - from 'cradle to grave'. This accessible and reliable information will be of great assistance to all those involved in the design, construction and management of buildings as they work to reduce the environmental burden of their properties.

The specifications shown throughout the Green Guide should not, however be used as a basis for on-site construction. They are of generic nature only and are used to illustrate a range of typical materials. Although every effort has been made to ensure that the information given here is accurate, our knowledge and understanding continues to evolve. The Green Guide ratings shown here represent our best efforts to provide objective, helpful guidance to enable the specifier to make more informed choices based on the data and methodologies available at this present time.

The Green Guide online has been developed alongside the printed version which will be published later this year. The Green Guide online offers a flexible and adaptable medium and will be updated on a regular basis.

**Green Guide 2008 Ratings**

### Green Guide 2008 ratings

The Green Guide 2008 ratings can be accessed by following a series of steps to allow you to select the most appropriate range of ratings, starting with the type of building in which the element will sit.

Some ratings apply to more than one building type and this will be stated at element selection stage.

The ratings can be viewed on screen or printed.

Note that ratings are copyright BRE and should not be reproduced in any publicly accessible format without the express permission of BRE. Please email the Green Guide Helpdesk.

## Green Guide 2008 ratings

Building type > **Domestic**

Category > **External Wall Construction**

### External Walls

**External wall ratings are the same for the following building types:**  
**Domestic, Health, Commercial, Retail, Industrial, Education**

**Functional unit for External Walls:**  
1m<sup>2</sup> of external wall construction, to satisfy current building regulations, and a U value of 0.3 W/m<sup>2</sup>K. Where relevant, the specification will also include an internal wall finish.

**Variation for retail/industrial**  
1m<sup>2</sup> of external wall construction, to satisfy current building regulations, and a U value of 0.3 W/m<sup>2</sup>K.

Perhaps more than any decision facing the designer, the choice of the external wall specification is subject to the widest range of practical, economic and visual considerations, some of which may be beyond the control of the design team.

External walls can have a significant contribution to the impacts of

# The Use of the Green Guide to Specification

- Architects and building specifiers
- Part of BRE's Environmental Assessment Methods for buildings
  - BREEAM & EcoHomes (BRE)
  - Code for Sustainable Homes (BRE & DCLG)
  - Materials specification credits
  - [www.breeam.org](http://www.breeam.org)

breeam

Protecting People, Property and the Planet

breglobal

# What is BREEAM?

- BRE - Environmental Assessment Method
- Voluntary Certification scheme for Buildings (but often specified as part of planning)
- Provides an environmental label for buildings
  - Pass, Good, Very Good, Excellent, Outstanding
- Independent & credible
- Holistic and Issue based – broad range of environmental concerns
- Ensures best environmental practice above regulatory minimum
- Large scope – many different types of buildings assessed
- Used mainly in UK but also growing Internationally

breeam

Protecting People, Property and the Planet

breglobal

# The Code for Sustainable Homes

- The Sustainable Buildings Task Group (SBTG)
- Set up by DEFRA, DTI, DCLG, EA, EP and others
- Launched April 2007, revised May 2008
- A single national standard for England
- Based on BREEAM - EcoHomes
  - (replaces EcoHomes in England)
- Mandatory rating for all new homes in England (May 08) and now for Wales too!

# Materials Specification

- One of the many issues assessed in BREEAM and The Code
- Credits available - variable
- Whole life environmental impact
- Key building elements assessed
- Green Guide to Specification
  - Ratings A+ to E
  - [www.thegreenguide.org.uk](http://www.thegreenguide.org.uk)

The screenshot shows the Breglobal website interface for the Green Guide 2008 ratings. The header features the 'breglobal' logo and the text 'THE GREEN GUIDE TO SPECIFICATION'. A left-hand navigation menu includes links such as '< Back to BRE', 'Home', 'Introduction to The Green Guide', 'Sponsors', 'Publications and Tools', 'How the Green Guide was compiled', 'How to use the Green Guide to Specification', 'Register', 'Login', and 'Green Guide 2008 Ratings'. The main content area is titled 'Green Guide 2008 ratings' and includes a 'Building type >' dropdown menu currently set to 'Commercial'. Below this, it prompts the user to 'Please select an element' and displays several buttons: 'Upper Floor Construction', 'Internal Wall', 'External Wall Construction', 'Insulation', 'Commercial Windows', 'Roof Construction', and 'Landscaping'. A 'CONTACT' box in the top right corner provides contact details: 'E: Green Guide Helpdesk' and 'T: +44 (0)1923 664 462'.

- Higher scores for better rated elements
- Code – Minimum D rated specifications
- Based on LCA and Environmental Profiles Methodology
- Bespoke ratings – Certified Environmental Profiles

# How are Roofs and Hard landscaping assessed within BREEAM and The Code?

- Points available within the materials specification credit
  - **Roofs**
  - **Hard landscaping**

## Green Guide performance for Roofs

- Roofing specifications vary by building type
- Greater impact for low rise buildings in comparison to high rise buildings
- Different specifications for Domestic, Industrial, Retail, Education and Commercial buildings
- Different ratings depending on pitch of roof and construction

# Green Guide performance for Roofs

- Generally...
- Flat roof cold deck - perform well (A+)
  - *Timber structures (low climate change impact)*
- Flat roof Inverted / warm deck
  - *Timber structures - perform well (A and A+)*
  - *Beam and block, concrete, metal structures - perform poorly (B to E)*
    - various different membranes (bitumen, PVC, TPO, asphalt)
    - Paving slabs have higher impact than pebbles
    - Insitu reinforced concrete performs very poorly (mostly D and E)
- Pitched roofs
  - *Timber and steel constructions (mostly all achieve A or A+)*

# Green Guide performance for Hard Landscaping

- Ratings are the same for all building types
- Different ratings dependant upon how trafficked the area is
- Generally:
  - Best performing = concrete paving flags / reclaimed clay pavers with a recycled or no sub-base
    - *Low climate change impacts*
  - Asphalt over recycled sub-base and sandstone / clay pavers perform well
    - *Low water and mineral extraction but high waste disposal*
  - Worst performing = Imported Chinese granite or imported Indian sandstone
    - *High climate change and minerals extraction impacts*

## Conclusions

- Sustainability becoming increasingly important for the construction industry
- LCA and Environmental Profiles are tools for assessing environmental performance
- The Green Guide to Specification is a useful tool for architects and specifiers
- Green Guide increasingly being used in the UK due to BREEAM and The Code for Sustainable Homes
