

Benefits to be gained from holistic approaches to sustainability:

| | Climate Change | Waste | Natural Resources | Community Partner | Health & Wellbeing |
|--------------------------|--|---|--|---|---|
| Community Support | Our community will increasingly recognise and respect our actions to combat climate change | We simply cannot afford to waste our resources and expect to get away with it | People are increasingly aware of the need to protect the planet for future generations | We are, and must continue to be leaders in our vibrant community | This is our core purpose, so we must excel in every aspect of this mission |
| Cost & Efficiency | Offsets rising energy costs and cost of Carbon e.g. in CRC Saving energy = saving carbon = saving money. | Waste costs money. This money can go back into services. | The costs of increasingly scarce or unsustainable materials will reward our actions | The community is both a user of our service and has a financial stake in the way we do things | Prevention of ill health and the costs of treatment |
| Improved Service | Use of smart, energy efficient technology | A modern, zero waste, highly efficient health system | Use of new, authentic and sustainable materials | Our success creates wealth in the local economy | Support of modern pathways for healthcare, including home care |
| Engagement of our People | People will be proud to work in a cleaner, greener low carbon environment | Everyone has a stake and a role in the elimination of waste | People care about the environment and want to make a difference | An engaged and supportive community will accelerate our success | People engaged in our mission & purpose will be encouraged to live healthier lifestyles |
