

Case Study – UCLH Site Waste Management Plans (SWMPs)

SITE WASTE MANAGEMENT PLANS

Our contractors are required to provide Site Waste Management Plans (SWMP) using the BRE SMARTWaste Tool for all sites at the design and construction stage. The Site Waste Management Plan will identify and set out how resources will be managed and waste controlled at all stages during a construction project in order to improve material resource efficiency by incorporating the provision for reuse, recovery and recycling of waste materials into the project's design. It will:

- List types and quantities of waste that will be produced
- Establish a procedure for how waste will be measured and reported
- Determine how the waste will be managed and stored on site
- Specify who will remove the waste and its destination in accordance with the waste hierarchy
- Establish a process for a post-construction review of performance against stated targets
- Assign overall responsibility for resource management to an individual
