

Welcome to ...

CARBON DETECTIVES

Carbon Detectives' three year mission is to:

- link schools and pupils across Europe to help slow down the impact of global climate change
- inspire and empower young people to take practical action to save energy and carbon in school
- enthuse and support teachers to bring carbon saving to life in the classroom

Search online for “Carbon Detectives Europe” and get your school involved today.

Our website has simple to use tools and materials to help your school take on their own Sustainability Mission. Simply register with some simple to answer questions to obtain your schools first Carbon footprint and gain access to the full programme through your very own homepage.

What happens next is up to you! You can refine the footprint, look at some activities to shrink your shoe size, take part in class questionnaires and activities, compare your school to others across Europe, and take a look at our exciting teaching resources.

Getting the most out of our website will require an existing or new team of active pupils and staff in your school. Your Carbon Detectives can take on “spying” missions around the school to find out what is really going on, they can set up website activities and start school wide campaigns.

But it is not just about improving your school now, there is more to us! We want all schools and every child to have a vision of what a low Carbon future might look like, and will be encouraging schools' to share their visions and compete with each other across the continent.

We are one family of schools trying to make a difference to our pupils, staff and planet. So our schools communicate with each other through image boards, direct contact with each other and easy Carbon footprint comparisons. We want to build bridges, gain cultural understanding and create new friendships.

Visit the Carbon Detectives website today at:

www.carbondetectives.org.uk

and find out how **YOU** can be involved, which schools you can link with **NOW** and sign up for your **OWN** Carbon Detectives Mission!

Carbon Detectives is supported by the Intelligent Energy Europe Programme and is active across Europe.
