

## Conservation and the environment

Heritage buildings exist in an ever changing environment. At BRE we are addressing the effects of global warming and the need for improved environmental performance of buildings in general. We can help you with the following:

- global warming and increasing energy efficiency
- acid rain and its effects on building stones and other materials
- conservation of energy and natural resources, ie tropical hardwoods
- internal environment: indoor air quality, ventilation and the growth of bacterial organisms and their potential effects on structures and artifacts
- atmospheric pollution including traffic pollution
- active and passive monitoring of volatile inorganic compounds
- allergic reactions to dust
- cost benefit analysis for heritage buildings
